

### **Important Pre-Notification About Integration:**

#### **API Information:**

Main User (Ana Kullanıcı) and Technical User (Teknik Sorumlu) are authorized to access "Merchant no (merchant\_id)", "Merchant password (merchant\_key)" and "Merchant secret key (merchant\_salt)" which are required for API. These credentials can be found on the INFORMATION (BİLGİ) page on the Merchant Panel (Mağaza Paneli).

#### **Integration consists of 2 steps:**

**STEP 1** - Display the payment form in an iFrame: A server-side request to the API is necessary to obtain iframe\_token. Payment form can then be opened inside an iFrame HTML TAG using this token.

**STEP 2** - Create the Callback URL to Receive Payment Results: Callback URL is the URL of a page on your website where the PayTR system will POST payment results.

**Please use Support (DESTEK) page on the Merchant Panel (Mağaza Paneli) for your inquiries regarding the integration process.**
